

To activate the complete version, connect your tablet to internet, then click on «**Activate full version**».

If you would like to activate the application while you are connected to your school's Wi-Fi, you may experience an issue...

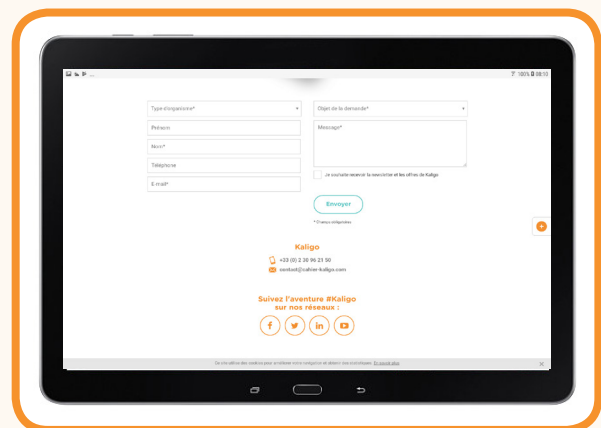

Some networks (proxy) block access to our server that validates Kaligo.

If you do experience this problem, we recommend:

- Change your Wi-Fi connection (at home or share your connection from your phone)
- Restart the application
- Enter the same username and password that was given to you (school's email address and password) and click «**login**».

If you do not have a username and password, click «**Obtain access**» and fill in the contact form. The team at Kaligo will provide them for you.

Once you have received your new username and password, enter them and click «**Connect**».

The full version of Kaligo is activated! You now have access to 7 exercise themes and the teacher mode which allows you to monitor your students and personalize the exercises.
